

# CKD Newsletter

April 2025

## Visualisations?

Visualisations are now available and in use across both PCNs and all ten practices. If you don't have the visualisation yet please use these instructions to install in your toolbar: [HERE](#), you can also watch back this short webinar (<30min) on installing and some of the key features: [HERE](#).

For those unfamiliar with visualisations, they work in a similar way to templates (with prompts, coding and links to actions), but crucially **they allow full SystemOne functionality during the consultation.**

They're also clearer, more intuitive and easier to use during reviews.

We have also **standardised exception codes for medicines** to optimise reporting so would encourage all staff to be utilising these so we can exclude patients who aren't able to take certain medicines.

Please give the visualisation a try and let us know any feedback.

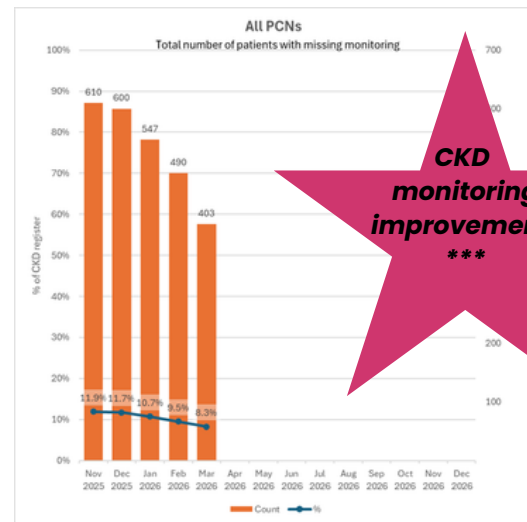

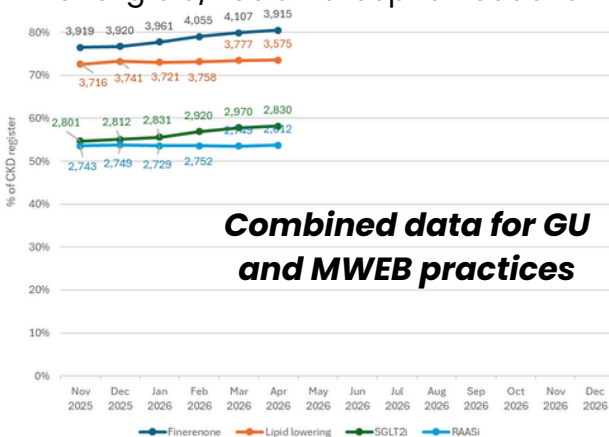

## Data on Guideline directed medical therapy

We are starting to see slow increases in more patients on the CKD register being prescribed guideline directed medical therapy (GDMT) in line with clinical guidelines, specifically RAASi (ACEi/ARB), SGLT2i ('flozins'), lipid lowering therapy (statins or alternatives) and finerenone.

In the data below we would want to see increases over time. It considers a patient to be on the right therapy if they are:

- Eligible for a medicine **AND** Prescribed a medicine in last 60 days

- OR
- Not eligible/has an exception code for the medicine.

**Ensure you apply relevant exception codes when unable to prescribe for a patient.**

Questions or Comments & to access training and resources, please get in touch:
